Subject Index

A
aa-tRNAs
  fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
ABCA1 gene
  PPARγ and metabolic disease, 351
Abortive primers
  DNA primases and, 56
Acanthamoeba spp.
  actin filament network regulation and, 652, 658, 660
Accessory factors
  replisome-mediated DNA replication and, 181–204
Accomodation/peptide bond formation
  fidelity of aminoacyl-tRNA selection on ribosome and, 420–22
Acetylation
  histone acetyltransferases and, 81–112
Acetylation-dependent targeting modules
  transcriptional coactivator complexes and, 491–92
Acetyltransferases
  histone acetyltransferases and, 81–112
  transcriptional coactivator complexes and, 487–88, 490, 492
Acidianus ambivalens
  signal recognition particle and, 761
ACT3/ARP4 gene
  histone acetyltransferases and, 105
ActA protein
  actin filament network regulation and, 659–60, 667
Actins
  ARP2/3 complex and, 649–72
  de novo protein folding in cell and, 633, 635, 637
  3-phosphorylate inositol lipids and, 576–84
Activases
  free radicals and enzyme catalysis, 132–35
Activation
  actin filament network regulation and, 649–72
  Cys_2His_2 zinc finger proteins and, 313–37
  fidelity of aminoacyl-tRNA selection on ribosome and, 420
  phospholipase C isozymes and, 288–308
  PPARγ and metabolic disease, 341
  transcriptional coactivator complexes and, 494
  ubiquitination and, 506
  viral membrane fusion and, 780–82
Active sites
  channeling of substrates and, 149–76
  divergent evolution of enzymatic function and, 214
  PTEN and myotubularin, 247–74
Actos®
  PPARγ and metabolic disease, 346
ADA genes
  histone acetyltransferases and, 103–4
Adaptors
  transcriptional coactivator complexes and, 475
"Address codes"
  signal recognition particle and, 764
Adenosine deaminase
  divergent evolution of enzymatic function and, 222
Adenosine triphosphate (ATP)
  de novo protein folding in cell and, 607–20, 630, 633
  DNA topoisomerases and, 369
  transcriptional coactivator complexes and, 486–87
  viral membrane fusion and, 804
Adenosylcobalamin
  free radicals and enzyme catalysis, 121, 138–43
S-Adenosylmethionine (SAM)
  free radicals and enzyme catalysis, 121–38
Adipocyte differentiation
  PPARγ and metabolic disease, 341, 344–45
ADP ribosylation factors (Arfs)
  3-phosphorylated inositol lipids and, 578–81
Aequoria victoria
  G protein signaling

regulation in yeast and, 718
Aeropyrum pernix
DNA topoisomerases and, 375
Age-1 gene
PTEN and myotubularin, 266–67
Agonists
PPARγ and metabolic disease, 348–51
Akt protein kinase
PTEN and myotubularin, 247–74
Alanine
free radicals and enzyme catalysis, 133–34
ubiquitination and, 519, 521
Allosteric coupling
channeling of substrates and, 149–76
de novo protein folding in cell and, 627
3-phosphorylated inositol lipids and, 535
ubiquitination and, 524
Alu domain
signal recognition particle and, 755, 769–72
Alzheimer's disease
de novo protein folding in cell and, 641
Amidohydrolase/phosphotriesterase
divergent evolution of enzymatic function and, 219–23
Aminoacyl-tRNA selection
fidelity of on ribosome, 415–32
Amino terminal domain
DNA primases and, 39, 69
histone acetyltransferases and, 81–112
Ammonia
channeling of substrates and, 163, 166–68
Amycolaptosis spp.
divergent evolution of enzymatic function and, 218–19
Anchors
Cys_2His_2 zinc finger proteins and, 323
Anisomycin
PTEN and myotubularin, 264
Ansamycin
de novo protein folding in cell and, 620
Antagonists
PPARγ and metabolic disease, 361–62
Anthranilate
tryptophan metabolism and, 9–10, 21–22
Anticodons
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
Antigen receptors
phospholipase C isozymes and, 296–300
Apoptosis
3-phosphorylated inositol lipids and, 574–76, 583
PTEN and myotubularin, 247, 260–64
ubiquitination and, 524
Aquifex aeolicus
DNA primases and, 44
DNA topoisomerases and, 375
Aquiflex aeolicus
free radicals and enzyme catalysis, 130–31
Arabidopsis spp.
PTEN and myotubularin, 269
Arabidopsis thaliana
copper trafficking proteins and, 679
flowering and fruit formation, 32
3-phosphorylated inositol lipids and, 544, 566
PTEN and myotubularin, 269
Archaebacteria
DNA topoisomerases and, 372, 375–76
Archaeoglobus fulgidus
DNA primases and, 47
DNA topoisomerases and, 375–76
Arf small kinases
3-phosphorylated inositol lipids and, 576
Arginine
ubiquitination and, 514, 522
aroL operon
tryptophan metabolism and, 22
ARP2/3 complex
actin filament network regulation and
ActA protein, 659–60
ARP2/3 complex structure, 652–53
CDC42, 663–65
cellular roles, 666–72
cortactin, 660–61
C-termini, 656–59
fungal myosin I, 660
future research, 672
introduction, 650–51
miscellaneous binding proteins, 665–66
nucleation-promoting factors, 659–61, 671–72
N-WASP, 668–69
PIP_2, 663–65
regulation, 661–66
WASp/Scar genes and proteins, 653–59, 661–72
yeasts, 666, 671–72
A site
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 417–22, 428

Asparagine synthetase
channeling of substrates and, 149, 169–70, 171
Aspergillus nidulans
G protein signaling regulation in yeast and, 723
Aspergillus spp.
actin filament network regulation and, 660
Atherosclerosis
PPARγ and metabolic disease, 341, 350–52
ATPases
copper trafficking proteins and, 677, 688–94
Attenuation
tryptophan metabolism and, 1, 23–26, 28–31
ATX1 metallochaperone family
copper trafficking proteins and, 679–88
Avandia®
PPARγ and metabolic disease, 346

B

Bacillus pumilis
tryptophan metabolism and, 28
Bacillus sphaericus
free radicals and enzyme catalysis, 137
Bacillus stearothermophilus
DNA primases and, 44, 66–68, 70
Bacillus subtilis
channeling of substrates and, 166–67, 175
divergent evolution of enzymatic function and, 219, 239
DNA primases and, 44
DNA topoisomerases and, 374
free radicals and enzyme catalysis, 130–32
tryptophan metabolism and, 8, 25, 28–30
Bacteriophage P4 primase
DNA primases and, 45–46
Bacteriophage T4
replisome-mediated DNA replication and, 181–204
Bacteriophage T4 primase
DNA primases and, 46
Bacteriophage T7
replisome-mediated DNA replication and, 181–204
Baculovirus
DNA primases and, 49
BADGE
PPARγ and metabolic disease, 360, 362
Bannayan-Zonana syndrome
PTEN and myotubularin, 247–74
Barbed ends
actin filament network regulation and, 649, 658
Benzylsuccinate synthase
free radicals and enzyme catalysis, 121, 137–38
divergent evolution of enzymatic function and, 209, 214, 222–26, 236, 239, 241
$\beta\beta\alpha$ structure
Cys_2His_2 zinc finger proteins and, 313–37
divergent evolution of enzymatic function and, 209, 214, 222–26, 236, 239, 241
Bezafibrate
PPARγ and metabolic disease, 343
Binding specificity
3-phosphorylated inositol lipids and, 563–64
Biotin synthase
free radicals and enzyme catalysis, 121, 136–37
Borrelia burgdorferi
DNA primases and, 44
DNA topoisomerases and, 375
Breast cancer
PPARγ and metabolic disease, 353
PTEN and myotubularin, 247–74
Bridging domain
viral membrane fusion and, 799–800
Bromodomains
histone acetyltransferases and, 100–1
transcriptional coactivator complexes and, 490–92
Brown adipocytes
PPARγ and metabolic disease, 344
Budding
G protein signaling regulation in yeast and, 703–43

C

C2 domain
3-phosphorylated inositol lipids and, 548–49
CAD complex
channeling of substrates and, 164
Caenorhabditis elegans
actin filament network regulation and, 654–56
copper trafficking proteins and, 679
DNA primases and, 47
3-phosphorylated inositol lipids and, 540, 542, 544, 554, 565
PTEN and myotubularin, 252–53, 256, 266, 269, 273
Campylobacter jejuni
DNA primases and, 44
DNA topoisomerases and, 375

Cancer
de novo protein folding in cell and, 641
histone acetyltransferases and, 81, 88, 110–11
PPARγ and metabolic disease, 353
PTEN and myotubularin, 247–74
Canis familiaris
PTEN and myotubularin, 253, 256
Capping
actin filament network regulation and, 658
Carbamate
channeling of substrates and, 163–64
Carbamoyl phosphate synthetase
channeling of substrates and, 149, 158–64
Carbon
free radicals and enzyme catalysis, 121, 126–28, 134, 136, 139–46
Carbonate
free radicals and enzyme catalysis, 134
Carboxyphenylamino-deoxyribulose-5-phosphate (CdRP)
tryptophan metabolism and, 9–10
Cardiac muscle
PPARγ and metabolic disease, 349
Carnitinyl CoA epimerase
divergent evolution of enzymatic function and, 227
Catalysis
enzymatic
radical mechanisms and, 121–46
Catalytic domain
3-phosphorylated inositol lipids and, 546–47
CBP protein
histone acetyltransferases and, 90–91
Ccc2 P-type ATPase
copper trafficking proteins and, 679–81, 689–90
CCS metallochaperone
copper trafficking proteins and, 694–98
CD4
viral membrane fusion and, 782, 789–92, 799–801
Cdc25 phosphatases
PTEN and myotubularin, 247–74
CDC34 gene
ubiquitination and, 508, 526
Cdc42 GTPase
actin filament network regulation and, 649, 655, 661–65
G protein signaling regulation in yeast and, 703, 708–14, 722, 727–30, 733–34, 740–41
CDDO-Me
PPARγ and metabolic disease, 360, 362
Cell cycle
DNA primases and, 39, 72
3-phosphorylated inositol lipids and, 582–83
Cell differentiation
histone acetyltransferases and, 81, 110
PPARγ and metabolic disease, 344, 345
Cell growth
PTEN and myotubularin, 247–74
Cell migration
3-phosphorylated inositol lipids and, 581–82
PTEN and myotubularin, 266
Cell proliferation
PTEN and myotubularin, 247, 264–66
Centaurins
3-phosphorylated inositol lipids and, 579
Cephalosporin synthase
divergent evolution of enzymatic function and, 233, 235
CFTR protein
de novo protein folding in cell and, 637
Channeling
of substrates and intermediates in enzyme-catalyzed reactions
allosteric communication, 156–58, 164
ammonia, 163, 166–68
asparagine synthetase, 169–71
carbamate, 163–64
carbamoyl phosphate synthetase, 158–64
conclusions, 176
electrostatic channeling, 173
formiminotransferase-cyclodeaminase, 173–74
glutamine phosphoribosylpyrophosphate amidotransferase, 165–69
GMP synthetase, 164–65
GPATase, 169
indole, 156
intermediacy of reactive species, 161–63
introduction, 150–52
kinetics, 156, 163–64, 172
lumazine synthase-riboflavin

synthase complex, 175
mammalian CAD complex, 164
2-oxo acid dehydrogenase complex, 174–75
thymidylate synthase-dihydrofolate reductase, 171–73
tryptophan fluorescence studies, 169
tryptophan synthase, 152–58
Chaperones
copper trafficking proteins and, 677, 679–88, 694–98
de novo protein folding in cell and, 603–41
Chaperonins
de novo protein folding in cell and, 603, 615
Charcot-Marie-Tooth syndrome
PTEN and myotubularin, 270
Chemokine receptors
viral membrane fusion and, 801–2
Chlamydia pneumoniae
DNA topoisomerases and, 375
Chlamydia trachomatis
DNA primases and, 44
DNA topoisomerases and, 375
Chlamydophila pneumoniae
DNA primases and, 44
Chorismate
tryptophan metabolism and, 10
Chromatin
DNA topoisomerases and, 369–408
histone acetyltransferases and, 81–112
transcriptional coactivator complexes and, 475, 485–91
Chromosome 10q23
PTEN and myotubularin, 247–74
Clavaminic acid synthase
divergent evolution of enzymatic function and, 233, 235
Cleavage/strand passage domain
DNA topoisomerases and, 378
Clofibrate
PPARγ and metabolic disease, 343
Clostridium acetobutylicum
DNA primases and, 44
Clostridium subterminale
free radicals and enzyme catalysis, 123, 130–31
Clostridium tetanomorphum
free radicals and enzyme catalysis, 141
ClpP protease
divergent evolution of enzymatic function and, 228
Coactivators
PPARγ and metabolic disease, 356, 358–59
transcriptional coactivator complexes and, 475–528
Cobalt
free radicals and enzyme catalysis, 121, 139–43, 145–46
Codon-anticodon complexes
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
Cofilin
actin filament network regulation and, 655
colE1 plasmic
tryptophan metabolism and, 19
ColE2 Red primase
DNA primases and, 50
Colinearity
tryptophan metabolism and, 1, 12–17
Collision-activated dissociation
protein and proteosome analysis by mass spectrometry, 448–49
Comet tails
actin filament network regulation and, 667
Compartmentalization
de novo protein folding in cell and, 630–31
Complexes
actin filament network regulation and, 649–72
channeling of substrates and, 174–75
de novo protein folding in cell and, 614–15, 626–28, 632–35
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
free radicals and enzyme catalysis, 143–44, 146
histone acetyltransferases and, 101–5
protein and proteosome analysis by mass spectrometry, 464–66, 468–70
transcriptional coactivator, 475–528
con genes
tryptophan metabolism and, 27
Conidiation
tryptophan metabolism and, 1
Conjugation
ubiquitination and, 506–12, 526–27
"Constipation"
enzymatic tryptophan metabolism and, 31

Cooperation
de novo protein folding in cell and, 635–36
Coordinate-covalent bonds
copper trafficking proteins and, 677
Copper trafficking proteins
ATX1 metallochaperone family, 679–88
Ccc2 P-type ATPase, 689–90
CCS metallochaperone, 694–98
conclusions, 698–99
conserved methionine in MXCXXC motif, 686–88
copper insertion into SOD1, 695–97
COX17 protein, 694
direct copper transfer between yeast Atx1 and Cc2, 679–81
Hah1 metallochaperone, 683–86
heterodimeric intermediate between SOD1 and CCS, 697–98
kinetics, 681–82
metallochaperones, 679–88, 694–98
overview, 678
partner specificity, 690–91
partner surface similarities, 691–94
P-type ATPases, 688–94
structural changes, 682–83
superoxide dismutase, 694–98
thermodynamics, 681–82
Cortactin
actin filament network regulation and, 660–61
Cotranslational folding
de novo protein folding in cell and, 603, 616–17, 620–23
Cotranslational protein targeting
signal recognition particle and, 756–59
Cowden syndrome
PTEN and myotubularin, 247–74
COX17 protein
copper trafficking proteins and, 694
cpc-1 gene
tryptophan metabolism and, 27
C-peptide region
gp41
viral membrane fusion and, 798–99
CRM material
tryptophan metabolism and, 8
Crotonase
divergent evolution of enzymatic function and, 209, 226–30
C-terminal domain
actin filament network regulation and, 649, 655–60, 662, 665–66, 668
de novo protein folding in cell and, 620, 632, 637
DNA primases and, 39, 69–70
ubiquitination and, 503, 506, 509–11, 518–19
Cx_5R phosphoinositide 3- and 4-phosphatase s
3-phosphorylated inositol lipids and, 552
Cyanovirin-N
viral membrane fusion and, 801
Cyclin E
de novo protein folding in cell and, 627
Cyclodeaminase
channeling of substrates and, 173–74
Cylindrical chaperonins
de novo protein folding in cell and, 603, 615
Cys-x_5-Arg
PTEN and myotubularin, 247–74
Cys_2His_2 zinc finger proteins
affinity, 329–30, 335
design strategies, 319–24, 335
dimers, 326–29, 335
future research, 334–36
gene therapy, 336
introduction, 314
in vivo function, 330–32
miscellaneous applications, 332–34, 336
miscellaneous DNA-binding domains, 332–34, 336
overview, 314–19, 336
polyfinger proteins, 326–29, 335
recognition code limitations, 324–26
selection strategies, 335
specificity, 329–30, 335
target site selection, 329–30, 335
Cysteine
Cys_2His_2 zinc finger proteins and, 313–37
free radicals and enzyme catalysis, 133–37, 140, 142
ubiquitination and, 505–6, 508–10, 521–22, 527
Cytohesins
3-phosphorylated inositol lipids and, 578–79
Cytoplasm
actin filament network regulation and, 649–72
Cytoskeleton
3-phosphorylated inositol lipids and, 576–84
Cytosol
de novo protein folding in cell and, 603–41

D
daf genes
PTEN and myotubularin, 266–67
dbEST database
protein and proteosome analysis by mass spectrometry, 453
Deacetylases
histone acetyltransferases and, 86–87
Deactivation
phospholipase C isozymes and, 292–93
Deaminases
divergent evolution of enzymatic function and, 221–22
Decarboxylases
divergent evolution of enzymatic function and, 227–28
Decatenation
DNA topoisomerases and, 369–408
Degradation
de novo protein folding in cell and, 636–38
tryptophan metabolism and, 18–19, 29–30
Dehalogenase
divergent evolution of enzymatic function and, 227–28
Dehydrases
tryptophan metabolism and, 8
Deinococcus radiodurans
DNA primases and, 44
DNA topoisomerases and, 375
free radicals and enzyme catalysis, 130–31
De novo protein folding
in cell
biochemistry, 624–26
chaperone systems in eukaryotic and prokaryotic cells, 607–20
chaperonin complexes, 626–28
chaperonins, 615–19
compartmentalization of protein folding in vivo, 630–31
complexes with Hsp70-like function, 614–15
complexity of folding in vivo, 638–40
conclusions, 638–41
cooperation between different chaperone systems, 635–36
cotranslational folding, 620–23
current view of de novo folding, 638–40
cytosolic chaperones, 623–36
degradation of newly translated proteins, 636–38
future research, 640–41
genetics, 623–26
group I chaperonins, 615–17
group II chaperonins, 618–19
"holding" chaperones, 614
Hsp70 system, 607–15, 624–26
Hsp90 system, 619–20, 628–29
in vitro, 604–6
in vivo, 604–6, 623–29
introduction, 604
perspectives, 640–41
recruitment of chaperones to sites of translation and translocation, 632–35
regulation of protein function, 638–40
ring-shaped chaperones, 615–19
"small" chaperones, 614, 624–26
15-Deoxy-$\Delta^{12,14}$-PGJ_2
PPARγ and metabolic disease, 346–47, 352
5′-Deoxyadenosyl radical
enzyme catalysis and, 121–46
Dephosphorylation
PTEN and myotubularin, 247–74
Deregulation
3-phosphorylated inositol lipids and, 582–84
Desensitization
G protein signaling regulation in yeast and, 703–43
Desmolases
tryptophan metabolism and, 6–9, 11
Deuterium
free radicals and enzyme catalysis, 129
Development
histone acetyltransferases and, 81, 107–9
DHNA CoA synthase
divergent evolution of enzymatic function and, 227
Diabetes
type 2
PPARγ and metabolic disease, 341–42, 348–51
Dictyostelium discoideum
actin filament network regulation and, 654–55, 660
G protein signaling regulation in yeast and, 722

3-phosphorylated inositol lipids and, 540, 542, 544, 581
$\Delta^{3,5}$, $\Delta^{2,4}$-Dienyl CoA isomerase
divergent evolution of enzymatic function and, 228
Differential two-dimensional gels
protein and proteosome analysis by mass spectrometry, 463–64
Diffusion
channeling of substrates and, 152
Dihydrofolate reductase (DHFR)
channeling of substrates and, 171–73
de novo protein folding in cell and, 622
Dihydronaphthoate
divergent evolution of enzymatic function and, 227
2,3-Dihydroxybiphenyl-1,2-dioxygenase
divergent evolution of enzymatic function and, 232
Dimerization
Cys_2His_2 zinc finger proteins and, 313, 326–29, 335
Dioldehydrase
free radicals and enzyme catalysis, 140, 144–46
Dioxygenase
divergent evolution of enzymatic function and, 231–32
Directional cell migration
3-phosphorylated inositol lipids and, 581–82
Discrimination
fidelity of aminoacyl-tRNA selection on ribosome and, 422–24
Distal active sites
channeling of substrates and, 149–76
Divergent evolution
enzymatic function and active site architecture, 214
amidohydrolase/phosphotriesterase, 219–23
analogs, 210
chemical mechanism, 213–14
conclusions, 241–42
crotonase, 226–30
enolase, 214–19
Fe-dependent oxidases and oxygenases, 232, 234
functionally distinct suprafamilies, 235–41
glossary, 210–12
histidine biosynthesis, 237–38
homologs, 210
imidazole-3-glycerol phosphate synthase, 237–38
indoleglycerol phosphate synthase, 236–37
introduction, 210
mandelate racemase subgroup, 216–18
mechanistically diverse superfamilies, 214–35
metabolism, 239
muconate lactonizing enzyme subgroup, 218–19
OMPDC/R5PE/HUMPS, 239–41
orthologs, 210
paralogs, 210
phosphoribosylanthranilate isomerase, 236–37
phosphoribosylformimino-5-aminoimidazole carboxamide ribonucleotide isomerase, 237–38
strategies, 213–14
structurally contextual function-based definitions, 211–12
substrate specificity, 213
superfamily structure-based definition, 210–11
thiyl radical, 223–26
tryptophan biosynthesis, 236–37
vicinal-oxygen-chelate, 230–33
DnaB helicase
E. coli
DNA primases and, 59–60
dna genes
DNA primases and, 45, 70
DNA binding
transcriptional coactivator complexes and, 475–528
DNA-binding cavities
DNA topoisomerases and, 369
DNA-binding domains
Cys_2His_2 zinc finger proteins and, 313–37
DNA helicases
DNA primases and, 39–40, 42–46, 59–63
replisome-mediated DNA replication and, 181–204
DNA microarray analysis
tryptophan metabolism and, 30–31
DNA polymerase
DNA primases and, 39–73
replisome-mediated DNA replication and, 181–204
DNA polymerase α
DNA primases and, 42, 46–49

DNA primases
bacteriophage P4 primase, 45–46
bacteriophage T4 primase, 46
colE2 Rep primase, 50
C-terminal domain, 69–70
DNA templates, 51–53
Drosophila primase, 48
E. coli DnaB helicase, 59–60
E. coli primase, 45
E. coli ssDNA-binding protein, 63–64
eukaryotic helicases, 63
eukaryotic primases, 46–49, 52–53, 71–72
eukaryotic ssDNA-binding proteins, 65
future research, 73
genes, 42–50
helicase-associated primases, 42–49
helicases in primer synthesis, 59–63
herpes simplex virus primase, 50
human primase, 49
inhibitors, 58–59
introduction, 40–42
miscellaneous primases, 49–50
mouse primase, 48–49
polymerase-associated primases, 46–49
primer elongation, 56–57
primer initiation, 55–56
primer synthesis, 53–65
prokaryotic primases, 42–49, 65–70
prokaryotic recognition sites, 51–52
proteins, 42–50
regulation, 72–73
replisome-mediated DNA replication and, 181–204
RNA synthesis domain, 68–69
sequence-specific interactions by eukaryotic primases, 52–53
single-stranded DNA-binding proteins, 63–65
SP6 primase, 46
substrate binding, 55–56
T4 gene 32 protein, 64
T4 gene 41 helicase, 60
T7 gene 2.5 protein, 64
T7 gene 4 helicase domain, 60–62
T7 primase, 43, 45
transfer of primers to DNA polymerase, 57–58
transfer protein primases, 49–50
vital recognition sites, 51–52
yeast primase, 47–48
zinc-binding domain, 65–68
DNA replication
DNA primases and, 39
DNA topoisomerases and, 369–408
replisome-mediated, 181–204
DNA replication fork
DNA primases and, 39–73
DNA synthesis
3-phosphorylated inositol lipids and, 570–74
DNA topoisomerases
archaebacteria, 375–76
catalytic mechanisms, 383, 393–95
cellular roles, 373–77
classification, 371–72
conclusions, 408
E. coli, 372–75
E. coli DNA topoisomerase I, 380–85
E. coli DNA topoisomerase III, 385–86
eubacteria, 372–76
eukaryotes, 377
higher eukaryotes, 377
human DNA topoisomerase I, 388–95
introduction, 370–71
negative supercoiling by DNA gyrase, 405–6
relaxation, 382–85, 395
reverse gyrase, 386–88
substrate specificity, 392–93
transport reaction, 404–5
type IA, 377–88
type IB, 388–97
type II, 397–406
type IIB, 406–8
vaccinia DNA topoisomerase, 395–97
yeasts, 376
Docking
channeling of substrates and, 151
copper trafficking proteins and, 677, 698
Domains
actin filament network regulation and, 649, 655–65, 668
copper trafficking proteins and, 689–90, 695–97
Cys_2His_2 zinc finger proteins and, 313–37
de novo protein folding in cell and, 603, 616–18, 620–22, 625, 627
DNA primases and, 39, 60–62, 65–70
DNA topoisomerases and, 378–81
histone acetyltransferases and, 81–112
3-phosphorylated inositol lipids and, 535, 546–50, 557–65
signal recognition particle and, 755, 760–62, 764–66, 769–72

transcriptional coactivator complexes and, 490–92
ubiquitination and, 503, 505–28
viral membrane fusion and, 799–800
Double-stranded DNA (dsDNA)
Cys_2His_2 zinc finger proteins and, 313–37
DNA topoisomerases and, 369–408
Drosophila melanogaster
actin filament network regulation and, 654–56
Cys_2His_2 zinc finger proteins and, 319
de novo protein folding in cell and, 629
DNA primases and, 43, 47–48, 57
DNA topoisomerases and, 377, 379–80
G protein signaling regulation in yeast and, 723
histone acetyltransferases and, 91, 105
3-phosphorylated inositol lipids and, 540, 542, 544, 554, 559, 567–70
PTEN and myotubularin, 256, 266–67, 269–70, 273
transcriptional coactivator complexes and, 481, 487
tryptophan metabolism and, 3–4, 6–8, 27
Drosophila pumillo
G protein signaling regulation in yeast and, 724
Dual specificity
PTEN and myotubularin, 247–74
Duplexes
codon-anticodonfidelity of aminoacyl-tRNA selection on ribosome and, 415–32

E

E3 ubiquitin protein ligases
ubiquitination and, 503–28
EBNA1 viral protein
de novo protein folding in cell and, 628
Eicosapentaenoic acid
PPARγ and metabolic disease, 346
Electrospray
protein and proteosome analysis by mass spectrometry, 437–38, 440–44, 452, 457–58, 461
Electrostatic bonds
copper trafficking proteins and, 677
Electrostatic channeling
channeling of substrates and, 173
Elongation
primer
DNA primases and, 56–57
Elongation arrest
signal recognition particle and, 768–72
Elongation factor Tu (EF-Tu)
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
Endoplasmic reticulum
de novo protein folding in cell and, 622, 634
Enolases
divergent evolution of enzymatic function and, 209, 214–19
Enterococcus hirae
copper trafficking proteins and, 682
Envelope glycoprotein
HIV-1
viral membrane fusion and, 777, 780–81, 786–804
Epimerases
divergent evolution of enzymatic function and, 227, 231
EPL1 gene
histone acetyltransferases and, 105
erbB-2 promoter
Cys_2His_2 zinc finger proteins and, 331
Escherichia coli
actin filament network regulation and, 663, 670
channeling of substrates and, 158, 164–67, 169–70
copper trafficking proteins and, 694
de novo protein folding in cell and, 607, 610, 614–15, 622, 625–26, 635
divergent evolution of enzymatic function and, 214, 216, 219, 224, 229–30, 236, 239
DNA primases and, 42–46, 49–50, 52, 55, 57–60, 63–70
DNA topoisomerases and, 372–75, 378–88, 391, 394–95, 397–403
fidelity of aminoacyl-tRNA selection on ribosome and, 416, 429–31
free radicals and enzyme catalysis, 121, 130–33, 135–37, 142
protein and proteosome analysis by mass spectrometry, 447, 463
replisome-mediated DNA replication and, 181–204
signal recognition particle and, 758, 761, 763–66
tryptophan metabolism and, 6, 8–11, 13, 16, 18–19, 25, 29–31
Eskimo diet
PPARγ and metabolic

disease, 342
Estrogen receptor modulators
PPARγ and metabolic disease, 353
Ethanolamine ammonia-lyase
free radicals and enzyme catalysis, 140, 144
Eubacteria
DNA topoisomerases and, 372–76
Eukaryotes
de novo protein folding in cell and, 603–41
DNA primases and, 39, 42, 46–49, 52–53, 63, 65, 71–72
DNA topoisomerases and, 369, 372–75, 377
histone acetyltransferases and, 81–112
signal recognition particle and, 755
transcriptional coactivator complexes and, 475–528
ubiquitination and, 503–28
EVH1 domain
actin filament network regulation and, 649, 656, 663, 665–66
Evolution
"divergent"enzymatic function and, 209–42
Evolutionary conservation
signal recognition particle and, 758, 760–62
Expressed sequence tag databases
protein and proteosome analysis by mass spectrometry, 453–54

F

FAB1 gene
3-phosphorylated inositol lipids and, 545
FAR1 protein
G protein signaling regulation in yeast and, 732–34
Fat cells
PPARγ and metabolic disease, 341–63
Fatty acids
PPARγ and metabolic disease, 341–63
F-box proteins
ubiquitination and, 525–26
Fe-dependent oxidase superfamily
divergent evolution of enzymatic function and, 209, 232–35
Fenofibrate
PPARγ and metabolic disease, 343
Ferulyl CoA
divergent evolution of enzymatic function and, 227
Ffh protein
signal recognition particle and, 755, 758, 760–61, 763–66
Fidelity
ribosome aminoacyl-tRNA selection and, 415–32
signal
G protein signaling regulation in yeast and, 739–42
Filaments
actin filament network regulation and, 649–72
Finger loop
signal recognition particle and, 764, 766
Fluorescence recovery after photobleaching (FRAP)
de novo protein folding in cell and, 606
Formiminotransferase-cyclodeaminase
channeling of substrates and, 173–74
Fosfomycin resistance protein
divergent evolution of enzymatic function and, 231
Fourier transform ion cyclotron resonance mass spectrometry (FTMS)
protein and proteosome analysis by mass spectrometry, 447, 449, 457
FP2113999
viral membrane fusion and, 801
Free radicals
enzyme catalysis and activase, 132–35
adenosylcobalamin-dependent reactions, 138–43
S-adenosylmethionine-dependent reactions, 122–38
dioldehydrase, 140, 144–46
ethanolamine ammonia-lyase, 140, 144
glutamate mutase, 140–41
glycoaldehyde, 144–46
hydroxyethyl hydrazine, 144
introduction, 122
lysine 2,3-aminomutase, 123–32, 143–44
methylmalonyl CoA mutase, 140–41
pyruvate formate-lyase, 132–35
ribonucleotide reductase, 142–43
suicide inactivation by formation of stable free radicals, 143–46
trans-4,5-dehydrolysine, 143–44

FtsY protein
signal recognition particle and, 755, 758–63
Functional centers
fidelity of aminoacyl-tRNA selection on ribosome and, 428–29
Functional genomics
protein and proteosome analysis by mass spectrometry, 437–70
Functionally-distinct suprafamilies
divergent evolution of enzymatic function and, 235–41
Fungi
actin filament network regulation and, 660
tryptophan metabolism and, 6
$FUS3^{MAPK}$
G protein signaling regulation in yeast and, 732
Fusion
viral membrane inhibition and, 777–804, 777
FYVE domain
3-phosphorylated inositol lipids and, 535, 558–59

G

β-Galactosidase
de novo protein folding in cell and, 628
G alpha transducin
de novo protein folding in cell and, 627
GAP-containing inositol 5-phosphatases (GIPs)
3-phosphorylated inositol lipids and, 556
GBD domain
actin filament network regulation and, 655–56, 663–64, 666
Geldanamycin
de novo protein folding in cell and, 620, 629
Gene therapy
Cys_2His_2 zinc finger proteins and, 313, 336
Genetic engineering
divergent evolution of enzymatic function and, 209
Genetics
actin filament network regulation and, 649, 653–59, 661–72
copper trafficking proteins and, 677
de novo protein folding in cell and, 603–41
DNA primases and, 42–50, 59–62, 64, 72
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
free radicals and enzyme catalysis, 132
G protein signaling regulation in yeast and, 703–43
histone acetyltransferases and, 81–112
myotubularin, 247–74
3-phosphorylated inositol lipids and, 535–89
PTEN, 247–74
transcriptional coactivator complexes and, 475–528
tryptophan metabolism and, 1–34
Genomics
divergent evolution of enzymatic function and, 209–42
protein and proteosome analysis by mass spectrometry, 437–70
replisome-mediated DNA replication and, 181–204
GI262570
PPARγ and metabolic disease, 346–47, 355–56, 358
Gim complex
de novo protein folding in cell and, 626, 632–35
Glitazone drugs
PPARγ and metabolic disease, 341, 346–47, 351–58, 360–63
Glomerella spp.
tryptophan metabolism and, 6
Glucose
PPARγ and metabolic disease, 341–42, 347–48, 350, 362
Glutamate mutase
free radicals and enzyme catalysis, 140–41
Glutamine phosphoribosylpyrophosphate amidotransferase
channeling of substrates and, 149, 165–69
Glutathione-S-transferase
protein and proteosome analysis by mass spectrometry, 446
Glycoaldehyde
free radicals and enzyme catalysis, 144–46
Glycoproteins
viral membrane fusion and, 777–804
Glycyl radical
free radicals and enzyme catalysis, 121, 132–34, 136–38
Glyoxylase I
divergent evolution of enzymatic function and, 231–32
GMP synthetase
channeling of substrates and, 164–65

GNAT family
histone acetyltransferases and, 87–89
gp41
viral membrane fusion and, 777, 782, 784–85, 787–91, 794, 796–99, 802–804
gp120
viral membrane fusion and, 799–803
$GPA1^{G\alpha}$
G protein signaling regulation in yeast and, 720–25
GPATase
channeling of substrates and, 167–71
G protein-initiated signal transduction in yeast
regulation of
background, 704–6
conclusions, 742–43
FAR1, 732–34
$FUS3^{MAPK}$, 732
$GPA1^{G\alpha}$, 720–25
heterotrimeric C protein subunits, 720–27
levels of regulation, 713–39
ligands, 715–16
MAPKKK, 729–30
mating pheromone response pathway, 707–13
overview, 706–13
P21-activated protein kinase, 727–29
perspectives, 742–43
protein kinase cascade, 727–32
receptors, 716–20
scaffold proteins, 732–39
scope, 704–6
signal fidelity, 739–42
$SST2^{RGS}$, 722–25
$STE4^{G\alpha}$, 721–22
$STE4^{G\beta}$, 725–27
STE5, 734–36
$STE7^{MAPKK}$, 731
STE11, 729–30
$STE18^{G\gamma}$, 722, 725–27
STE20, 727–29
G proteins
phospholipase C isozymes and, 288–93, 301–3
Green fluorescent protein (GFP)
G protein signaling regulation in yeast and, 718
GroEL chaperonin
de novo protein folding in cell and, 603, 612–13, 615–19, 623, 626–27, 629–32, 635–36, 639
GTPase-activating proteins (GAPs)
3-phosphorylated inositol lipids and, 578–79
GTPases
actin filament network regulation and, 649, 655, 661–65
fidelity of aminoacyl-tRNA selection on ribosome and, 420
signal recognition particle and, 755, 759–68
Guanosine nucleotide exchange factors (GEFs)
G protein signaling regulation in yeast and, 703, 708–14, 722, 727–30, 733–34, 740–41
3-phosphorylated inositol lipids and, 576–79
Guanosine triphosphate (GTP)
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
GW0072
PPARγ and metabolic disease, 354, 360–61
GW1929
PPARγ and metabolic disease, 347
GW7845
PPARγ and metabolic disease, 347
GW9662
PPARγ and metabolic disease, 360, 362
Gyrases
DNA topoisomerases and, 369–408

H

Haemophilus influenzae
DNA primases and, 44, 68
DNA topoisomerases and, 374
free radicals and enzyme catalysis, 130–31
Hah1 metallochaperone
copper trafficking proteins and, 683–86
Hairpins
DNA primases and, 63
tryptophan metabolism and, 23, 29
viral membrane fusion and, 777, 785, 787–91, 794, 804
Haloarcula marismuorti
de novo protein folding in cell and, 631
Haploinsufficiency
PPARγ and metabolic disease, 349
Heat shock proteins
de novo protein folding in cell and, 603, 607–15, 619–20, 624–26, 628–29
HECT domain E3s
ubiquitination and, 503, 505, 507, 510–11, 515–20, 526–28
HeLa cells
protein and proteosome

analysis by mass spectrometry, 468–69
Helical domain
3-phosphorylated inositol lipids and, 549–50
Helicases
DNA primases and, 39–40, 42–46, 59–63
replisome-mediated DNA replication and, 181–204
ubiquitination and, 527
Helicobacter pylori
DNA primases and, 44
Helix-destabilizing protein
replisome-mediated DNA replication and, 181–204
Herbimycin A
de novo protein folding in cell and, 620
Herpes simplex virus primases
DNA primases and, 50
Heterodimerization
copper trafficking proteins and, 697–98
DNA primases and, 39–73
Heterotrimerization
G protein signaling regulation in yeast and, 703, 720–27
phospholipase C isozymes and, 288–93
High-protein liquid chromatography (HLPC)
protein and proteosome analysis by mass spectrometry, 455, 458
High-resolution structure
viral membrane fusion and, 782–83
Hinged clamps
DNA topoisomerases and, 369
his operon
tryptophan metabolism and, 20–21
Histidine
Cys_2His_2 zinc finger proteins and, 313–37
divergent evolution of enzymatic function and, 209, 237–38
tryptophan metabolism and, 20–21
ubiquitination and, 505, 519
Histone acetyltransferases (HATs)
acetylation, 106–7
bromodomains, 100–1
cancer, 110–11
catalytic domain, 93–95
catalytic mechanisms, 96–99
chromatin modifiers, 105–6
complexes, 101–5
discovery, 84–87
families, 87–91
functional motifs, 87–91
future research, 111–12
GNAT family members, 87–89
HAT-A, 85–86
HAT-B, 84–86
histone deacetylases, 86–87
identification, 84–87
introduction, 82–84
kinetic mechanisms, 96–99
mammalian development, 107–9
miscellaneous modifications, 106–7
MSL complex, 105
multiple enzymes, 87
MYST family members, 88–89
nonhistone HAT substrates, 92–93
nonrandomness, 91–93
NuA3 complex, 104–5
NuA4 complex, 104–5
p300/CBP, 90–91
PCAF complex, 101–4
regulation, 99–101
SAGA complex, 101–4
site specificity, 91–93
structure, 93–94
substrate specificity, 91–93
summary, 112
targeted vs nontargeted acetylation, 85–86
transcriptional coactivator complexes and, 487–88, 490, 492
"Holding" chaperones
de novo protein folding in cell and, 614
Holoenzymes
replisome-mediated DNA replication and, 181–82
Homo sapiens
DNA primases and, 43, 47
PTEN and myotubularin, 253, 256
Homologs
divergent evolution of enzymatic function and, 210
Host-cell membrane
viral membrane fusion and, 777–804
Hsp70 chaperone
de novo protein folding in cell and, 603, 607–15, 624–26
Hsp90 system
de novo protein folding in cell and, 619–20, 628–29
Human immunodeficiency virus type 1 (HIV-1)
viral membrane fusion and, 777–81, 786–803
Human primase
DNA primases and, 49
Huntington's disease
de novo protein folding in cell and, 641
Hydrogen
free radicals and enzyme catalysis, 121, 123–25, 127, 132–36, 139, 141, 143–44

Hydrogen bonds
copper trafficking proteins and, 677, 689
Hydrolases
divergent evolution of enzymatic function and, 227
Hydrolysis
DNA topoisomerases and, 369
GTP
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 420, 422–23
Hydrophobic groove
signal recognition particle and, 764–66
Hydroxyethyl hydrazine
free radicals and enzyme catalysis, 144
Hydroxyoctadecadienoic acid
PPARγ and metabolic disease, 347, 351
Hyperplasia
PTEN and myotubularin, 247–74
Hypertension
PPARγ and metabolic disease, 341–42, 350, 352

I

IAP100 molecule
de novo protein folding in cell and, 634
Imidazole-3-glycerol phosphate synthase
divergent evolution of enzymatic function and, 237–38
Immobilized metal affinity chromatography (IMAC)
protein and proteosome analysis by mass spectrometry, 460–61
Immobilized pH gradient (IPG)
protein and proteosome analysis by mass spectrometry, 463
Inactivation
suicide
free radicals and enzyme catalysis, 121, 143–46
Indole
channeling of substrates and, 156
tryptophan metabolism and, 6, 9–11, 13
Indoleglycerol phosphate
tryptophan metabolism and, 9–11, 13, 31
Indoleglycerol phosphate synthase
divergent evolution of enzymatic function and, 236–37
Induced fit
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 425–26
Influenza hemagglutinin
viral membrane fusion and, 777–78, 780–81, 783, 785–87, 789–95, 804
Inhibitors
DNA primases and, 58–59
3-phosphorylated inositol lipids and, 550–51
Initial selection
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 422–23
Initiation
primer
DNA primases and, 55–56
Inositol 5-phosphatases
3-phosphorylated inositol lipids and, 556–57
Insertion box domain
signal recognition particle and, 761
Insulin resistance
PPARγ and metabolic disease, 344–51
Intact protein analysis
protein and proteosome analysis by mass spectrometry, 446–47
Intermolecular tunnels
channeling of substrates and, 149–76
Invasion
PTEN and myotubularin, 266
Invertebrates
PTEN and myotubularin, 266–67
In vitro evolution
divergent evolution of enzymatic function and, 209
In vivo protein folding
newly translated proteins and, 603–41
Iodoacetamide
protein and proteosome analysis by mass spectrometry, 463
Ionization methods
protein and proteosome analysis by mass spectrometry, 437, 440–41, 458, 461
Ion-trapping instruments
protein and proteosome analysis by mass spectrometry, 437, 444–45
IQN17 molecule
viral membrane fusion and, 798
Iron-sulfur centers
free radicals and enzyme catalysis, 121–22, 128–30, 132, 136
Isomerase
divergent evolution of enzymatic function and, 227–28, 236–38

Isopenicillin N synthase
divergent evolution of enzymatic function and, 233, 235
Isopeptide bonds
ubiquitination and, 503, 505

J

J-domain
de novo protein folding in cell and, 633–34

K

KCH CoA hydrolase
divergent evolution of enzymatic function and, 227
2-Ketocyclohexyl
divergent evolution of enzymatic function and, 227
Kidneys
3-phosphorylated inositol lipids and, 556
Kinetics
channeling of substrates and, 149–76
copper trafficking proteins and, 681–82
fidelity of aminoacyl-tRNA selection on ribosome and, 417–22, 424–26
free radicals and enzyme catalysis, 141, 143
histone acetyltransferases and, 96–99
Kirromycin
fidelity of aminoacyl-tRNA selection on ribosome and, 429
Klebsiella aerogenes
divergent evolution of enzymatic function and, 220
Kynurenine
tryptophan metabolism and, 5–6

L

Lactobacillus leishmanii
divergent evolution of enzymatic function and, 225
free radicals and enzyme catalysis, 142
Lactococcus lactis
DNA primases and, 44
Lagging strand
replisome-mediated DNA replication and, 181, 185–89, 192–96, 200–3
Leading strand
replisome-mediated DNA replication and, 181, 184–203
Legionella pneumophila
DNA primases and, 44
Leishmania casei
channeling of substrates and, 172
Leishmania major
channeling of substrates and, 172–73
Leucine
ubiquitination and, 514
Ligands
G protein signaling regulation in yeast and, 715–16
3-phosphorylated inositol lipids and, 559–63
PPARγ and metabolic disease, 341, 346–47, 353, 355–58
Ligases
ubiquitination and, 503–28
Lipid phosphatase
PTEN and myotubularin, 247–74
Lipids
3-phosphorylated inositol lipids, 535–89
PPARγ and metabolic disease, 341–42, 347, 362
Lipoate synthase
free radicals and enzyme catalysis, 121, 136–37
Liquid chromatography
protein and proteosome analysis by mass spectrometry, 454–59
Listeria monocytogenes
actin filament network regulation and, 651, 656, 659, 668
DNA primases and, 44
Liver
PPARγ and metabolic disease, 345–46, 348–50
Luciferase
de novo protein folding in cell and, 621, 627–28, 630, 636, 640
Lumazine synthase-riboflavin synthase complex
channeling of substrates and, 175
LY294002
3-phosphorylated inositol lipids and, 550–51
Lysine
histone acetyltransferases and, 81–112
ubiquitination and, 503, 505, 510, 513–14, 520–21, 523–24, 528
Lysine 2,3-aminomutase
free radicals and enzyme catalysis, 121, 123–32, 143–44

M

Macromolecular environment
de novo protein folding in cell and, 603–41
Maize
R locus and, 7
Major histocompatibility complex (MHC) class I
de novo protein folding in cell and, 637
Mammalian CAD complex

channeling of substrates and, 164
Mammals
DNA topoisomerases and, 372
histone acetyltransferases and, 107–9
3-phosphorylated inositol lipids and, 584–86
transcriptional coactivator complexes and, 489–90
Mandelate racemase subgroup
divergent evolution of enzymatic function and, 216–18
Mass spectrometry
proteins and proteosomes analysis by
analyzing protein complexes and organelles without gel separation, 468–70
database searching, 450–54
differential 2-D gels, 463–64
digestion and preparation of gel-separated proteins, 446–47
electrospray, 440–41
electrospray quadrupole mass spectrometers, 442–44
expressed sequence tag databases, 453–54
genome databases, 453
intact protein analysis, 446–47
introduction, 438–39
ionization methods, 440–41
ion-trapping instruments, 444–45
liquid chromatography, 454–59
MALDI, 440
MALDI time-of-flight mass spectrometer, 442
miscellaneous mass spectrometers, 445
outlook, 470
peptide mass fingerprinting, 450
peptide sequencing, 448–49
posttranslational modifications, 459–62
protein complexes, 464–66
protein databases, 453
protein modifications, 454
protein purification and preparation, 445–46
proteomic strategies and examples, 463–70
quantitative mass spectrometry, 462–63
secreted proteins, 467
signal transduction, 466–67
tandem mass spectrometry, 448–59
Mating pheromones
G protein signaling regulation in yeast and, 703–43
Matrix-assisted laser desorption ionization (MALDI)
protein and proteosome analysis by mass spectrometry, 437–38, 440, 442–43, 445–47, 450–51, 460, 463
MCC-555
PPARγ and metabolic disease, 360–61
M domain
signal recognition particle and, 764–66
Mechanistically diverse superfamilies
divergent evolution of enzymatic function and, 214–35
Mediator complex
yeast
transcriptional coactivator complexes and, 481–85
Mediterranean diet
PPARγ and metabolic disease, 342
Membrane polyphosphoinositides
actin filament network regulation and, 649, 655
Menkes disease
copper trafficking proteins and, 677, 688–89, 693
Messenger RNA (mRNA)
DNA primases and, 72
fidelity of aminoacyl-tRNA selection on ribosome and, 415
PTEN and myotubularin, 269
tryptophan metabolism and, 18–19
Metabolic disease
PPARγ and, 341–63
Metabolism
divergent evolution of enzymatic function and, 209, 239
3-phosphorylated inositol lipids and, 535–89
tryptophan, 1–34
Metallochaperones
copper trafficking proteins and, 677, 679–88, 694–98
Metal transfer
copper trafficking proteins and, 677, 679–81
Metazoan coactivator complexes
transcriptional coactivator complexes and, 481–85
Methanobacterium thermoautotrophicum

de novo protein folding in cell and, 615
divergent evolution of enzymatic function and, 239
Methanococcus jannaschii
DNA primases and, 47
DNA topoisomerases and, 375, 400, 407
Methanopyrus kandleri
DNA topoisomerases and, 372, 375, 377, 387–88
Methionine
copper trafficking proteins and, 686–88
Methylmalonyl CoA epimerase
divergent evolution of enzymatic function and, 231
Methylmalonyl CoA mutase
free radicals and enzyme catalysis, 140–41
Michalis complex
free radicals and enzyme catalysis, 146
Minicircle
replisome-mediated DNA replication and, 188
Mitogen-activated protein kinase (MAPK)
G protein signaling regulation in yeast and, 706, 710–12, 724, 727–32, 735–36, 738–42
Mitogen-activated protein kinase kinase kinase (MAPKKK)
G protein signaling regulation in yeast and, 729–30
Molecular tunnels
channeling of substrates and, 149–76
Mother filaments
actin filament network regulation and, 656, 658–59
Mouse primase
DNA primases and, 48–49
MSL complex
histone acetyltransferases and, 105
MTM1 gene
PTEN and myotubularin, 270–71
mtr operon
tryptophan metabolism and, 22, 29
Muconate lactonizing enzyme subgroup
divergent evolution of enzymatic function and, 218–19
Multidomain proteins
de novo protein folding in cell and, 604, 616–18, 620–22, 625, 627
Multiple activators
transcriptional coactivator complexes and, 494
Multiple active sites
channeling of substrates and, 149–76
Multisubunit RING E3s
ubiquitination and, 524–26
Mus musculus
DNA primases and, 47
PTEN and myotubularin, 253, 256
mutT gene
tryptophan metabolism and, 16
MXCXXC motif
copper trafficking proteins and, 686–88
Mycobacterium smegmatis
DNA primases and, 44
Mycobacterium tuberculosis
DNA primases and, 44
DNA topoisomerases and, 375
Mycoplasma genitalium
DNA primases and, 44
DNA topoisomerases and, 375
Mycoplasma pneumoniae
DNA primases and, 44
DNA topoisomerases and, 375
Myosin
actin filament network regulation and, 660, 666
de novo protein folding in cell and, 628, 640
Myotubularin-like phosphatases
3-phosphorylated inositol lipids and, 552
MYST family
histone acetyltransferases and, 88–89
Myxococcus xanthus
DNA primases and, 44

N

Nanoelectrospray
protein and proteosome analysis by mass spectrometry, 452
NC-2100
PPARγ and metabolic disease, 360–61
Negative supercoiling
DNA topoisomerases and, 405–6
Neisseria meningitidis
DNA primases and, 44
DNA topoisomerases and, 375
Neurospora spp.
history of research, 5
tryptophan metabolism and, 6–8, 11, 27–28
Newly translated proteins
de novo protein folding in cell and, 603–41
NG domain
signal recognition particle and, 760–62
Niacin
tryptophan metabolism and, 5–6, 8

Nitrogen
free radicals and enzyme catalysis, 126–27, 133
Noncognate aminoacyl-tRNAs
fidelity of aminoacyl-tRNA selection on ribosome and, 423–24
Nonnative polypeptides
de novo protein folding in cell and, 603–41
Nonrandomness
histone acetyltransferases and, 91–93
Nonreceptor protein tyrosine kinases
phospholipase C isozymes and, 296–303
Nontargeted acetylation
histone acetyltransferases and, 85–86
nrdb database
protein and proteosome analysis by mass spectrometry, 453
N-terminal domain
actin filament network regulation and, 655, 659–61, 664
de novo protein folding in cell and, 620–22, 632, 637, 640
ubiquitination and, 513–14, 521
NuA3 complex
histone acetyltransferases and, 104–5
NuA4 complex
histone acetyltransferases and, 104–5
Nucleation-promoting factors
actin filament network regulation and, 649, 651, 656–61, 671–72
Nucleic acid-programmed polymerases
fidelity of aminoacyl-tRNA selection on ribosome and, 425–32
Nucleosomal barriers
histone acetyltransferases and, 81–112
Nucleosome remodeling complexes
transcriptional coactivator complexes and, 486–87
Nucleotide exchange
signal recognition particle and, 763
N-WASP protein
actin filament network regulation and, 649, 651, 654, 656, 658–59, 663–66, 668–69

O

Obesity
PPARγ and metabolic disease, 341–42, 349
Okazaki fragments
DNA primases and, 40, 42–43, 45, 70
replisome-mediated DNA replication and, 181–204
Oligoribonucleotides
DNA primases and, 39–73
OMPDC/R5PE/HUMPS superfamily
divergent evolution of enzymatic function and, 239–41
Oncogenesis
histone acetyltransferases and, 81, 88, 110–11
One-enzyme equilibrium
DNA topoisomerases and, 406
One gene-one enzyme hypothesis
tryptophan metabolism and, 5, 12–13
Organelles
protein and proteosome analysis by mass spectrometry, 468–70
Orthologs
divergent evolution of enzymatic function and, 210
Oxidases
divergent evolution of enzymatic function and, 209, 232–35
2-Oxo acid dehydrogenase complex
channeling of substrates and, 174–75
Oxygenases
divergent evolution of enzymatic function and, 232–35

P

P21-activated protein kinase
G protein signaling regulation in yeast and, 727–29
p110γ phosphoinositide 3-kinase
3-phosphorylated inositol lipids and, 545–50
p235/Fab1p phosphoinositide 5-kinase
3-phosphorylated inositol lipids and, 544–45
p300 protein
histone acetyltransferases and, 90–91
Paralogs
divergent evolution of enzymatic function and, 210
parB gene
DNA primases and, 70
Particle-receptor interaction
signal recognition particle and, 762–63
Partner specificity
copper trafficking proteins and, 690–91
PCAF complex
histone acetyltransferases

and, 101–4
PCAF/GCN5 complexes
transcriptional coactivator complexes and, 490
PDK1 protein kinase
PTEN and myotubularin, 247–74
Penicillins
divergent evolution of enzymatic function and, 233, 235
Peptide bond formation
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 422–23
Peptide mass fingerprinting
protein and proteosome analysis by mass spectrometry, 450
Peptide sequencing
protein and proteosome analysis by mass spectrometry, 448–49
Peroxisome proliferator-activated receptor γ (PPARγ)
metabolic disease and
adipocyte differentiation, 344–45
antagonists, 361–62
antidiabetic effects of PPARγ agonists, 348–51
atherosclerosis, 351–52
coactivators, 358–59
hypertension, 352
insulin resistance, 345–51
introduction, 342–44
modulation, 352–62
perspectives, 362–63
selective PPARγ modulators, 359–61
structural studies, 353–58
summary, 362–63
type 2 diabetes, 348–51
Phage display
Cys_2His_2 zinc finger proteins and, 313–37
Phenylalanine
tryptophan metabolism and, 28
Pheromones
G protein signaling
regulation in yeast and, 703–43
Phosphatases
PTEN and myotubularin, 247–74
Phosphatidylinositol-4,5-biphosphate
actin filament network regulation and, 649, 661–65, 668
Phosphatidylinositol 3-phosphate
PTEN and myotubularin, 247–74
Phosphatidylinositol 3,4,5-triphosphate
PTEN and myotubularin, 247–74
Phosphoinositide phosphatases
conclusions, 274
introduction, 248–49
myotubularin
myotubular myopathy, 269–71
phosphatase activity, 271–72
physiologic function, 273–74
related proteins, 272–73
structural features, 271
PTEN
apoptosis, 259–64
biochemistry, 252–59
cell proliferation, 264–66
invasion, 266
invertebrates, 266–67
migration, 266
motility, 266
phosphatase activity, 253–57
physiological functions, 259–67
regulation, 268–69
regulatory modules, 257–59
structure, 252–53
tumor suppressor, 249–52
Phospholipase C isozymes
phosphoinositide-specific
conclusions, 308
introduction, 282–83
PLC-Δ activation, 304–5
PLC-ε activation, 305–8
PLC-γ isozymes
activation of PLC-γ by miscellaneous lipid-derived messengers, 303–4
activation of PLC-γ by receptor protein tyrosine kinases, 293–96
antigen receptor-induced activation of PLC-γ by nonreceptor protein tyrosine kinases, 296–300
G protein-coupled receptor activation of PLC-γ by nonreceptor protein tyrosine kinases, 301–3
reaction heterotrimeric G proteins
activation of PLC-β by $G_q\alpha$ subunits, 288–90
activation of PLC-β by $G\beta\gamma$ subunits, 290–92

deactivation of PLC-β signaling, 292–93
reaction mechanism, 285–87
structural organization, 283–85
Phosphoribosylanthranilate isomerase (PRAI)
divergent evolution of enzymatic function and, 236–37
Phosphoribosyl-formimino-5-aminoimidazole carboxamide ribonucleotide isomerase (PFACRI)
divergent evolution of enzymatic function and, 237–38
Phosphoribosylpyrophosphate tryptophan metabolism and, 9–10
3-Phosphorylated inositol lipids
biological effects, 567–84
C2 domain, 548–49
catalytic domain, 546–47
cellular origins, 565–67
Cx5R phosphoinositide 3- and 4-phosphatases, 552
FYVE domain, 558–59
GAP-containing inositol 5-phosphatases, 556
generic phosphoinositide pathways, 536–38
helical domain, 549–50
LY294002, 550–51
mammals, 584–86
metabolism, 552–55, 557, 584
overview, 538–39
p100γ phosphoinositide 3-kinase, 545–50
perspectives, 587–89
phosphoinositide 3-kinases, 539–40, 578–79, 583
actin cytoskeleton, 576–84
apoptosis, 574–76, 583
Arf-GAPs, 579
Arfs, 576, 578–81
cell cycle progression, 582–83
centaurins, 579
class I, 540–41
class IA, 542
class IB, 542–43
class II, 543–44
class III, 544
cytohesins, 578–79
deregulation of activity by PTEN, 582–84
directional cell migration, 581–82
DNA synthesis, 570–74
GAPs, 578–79
GEFs, 576–79
genetic alteration of pathways, 584–86
growth, 567–70
inhibitors, 550–51
Rac, 576–78
regulation, 576, 583–84
remodeling, 579–81
Rho small kinases, 576
phosphoinositide 3-phosphatases, 570, 574
genetic alteration of pathways, 586–87
myotubularin-like phosphatases, 552
PTEN, 554–55
Sac1p phosphatase, 552, 554
phosphoinositide 4-phosphatases, 555
phosphoinositide 5-kinase p235/Fab1p, 544–45
PIP_3, 566–67
pleckstrin homology domains
3-phosphoinositide binding specificity, 563–64
PH domain function in vivo, 564–65
structure determination of PH domains in absence of ligands, 559–60
structure determination of PH domains in presence of ligands, 560–63
proline-rich domain-containing inositol 5-phosphatases, 557
protein kinases, 539–45
PtdIns(3,4)P2, 566
PtdIns(3,5)P2, 566
PtdIns3P, 565–66
RAS-binding domain, 547–48
Sac1p-containing inositol 5-phosphatases, 556–57
SH2 domain-containing inositol 5-phosphatases, 557
skeletal muscle and kidney-enriched 5-inositol phosphatase, 556
targets, 558–67
type II 5-phosphatases, 555–56
wortmannin, 550–51
X-ray crystallography, 545–50
Phosphorylation
actin filament network regulation and, 668
G protein signaling regulation in yeast and, 703–43
protein and proteosome analysis by mass spectrometry, 437, 459–62
Phosphotriesterase
divergent evolution of enzymatic function and, 219–23

Pioglitazone
PPARγ and metabolic disease, 346
π radicals
free radicals and enzyme catalysis, 129
Pleckstrin homology (PH) domains
3-phosphorylated inositol lipids and, 535, 559–65
Polyfinger proteins
code
Cys_2His_2 zinc finger proteins and, 326–29, 335
Polyfunctional enzymes
channeling of substrates and, 149–76
Polymerase α
DNA primases and, 42, 46–49
Polymerase accessory factors
replisome-mediated DNA replication and, 181–204
Polymerases
DNA primases and, 39–73
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
replisome-mediated DNA replication and, 181–204
Polymerization
actin filament network regulation and, 649, 656–58, 666–67
Polyphosphoinositides
actin filament network regulation and, 649, 655
Polyunsaturated fatty acids (PUFAs)
PPARγ and metabolic disease, 341–63
Porphyromonas gingivalis
free radicals and enzyme catalysis, 130–31
Posttranslational modifications
protein and proteosome analysis by mass spectrometry, 437, 459–62
Poxviruses
DNA topoisomerases and, 372
PPARγ gene
PPARγ and metabolic disease, 345, 349, 362
Prefoldin
de novo protein folding in cell and, 626, 632–33, 635
Prehairpin intermediate
viral membrane fusion and, 777, 788–91, 804
Primases
DNA, 39–73
replisome-mediated DNA replication and, 181–204
Primers
DNA primases and, 39–73
Primosome
replisome-mediated DNA replication and, 181–204
Prion proteins
de novo protein folding in cell and, 641
PRO 2000
viral membrane fusion and, 801
Profilin
actin filament network regulation and, 663
Prokaryotes
de novo protein folding in cell and, 603–41
DNA primases and, 42–49, 51–52, 65–70
DNA topoisomerases and, 369
replisome-mediated DNA replication and, 181–204
signal recognition particle and, 755
Proline-rich domain-containing inositol 5-phosphatases (PIPs) 3-phosphorylated inositol lipids and, 557
Proofreading
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 422–23
Proteases
divergent evolution of enzymatic function and, 228
Proteasomes
de novo protein folding in cell and, 612, 637–38
mass spectrometry and, 437–70
ubiquitination and, 503–5, 513–15, 523–24, 527
Protein folding
de novo
cell and, 603–41
Protein kinases
G protein signaling regulation in yeast and, 703, 727–32
phospholipase C isozymes and, 293–303
3-phosphorylated inositol lipids and, 535, 539–51, 567–86
PTEN and myotubularin, 247–74
transcriptional coactivator complexes and, 490
Protein-protein interactions
replisome-mediated DNA replication and, 181–204
Protein tyrosine phosphatases
PTEN and myotubularin, 247–74
Proteomics
de novo protein folding in cell and, 641
mass spectrometry and, 437–70
PPARγ and metabolic disease, 362
Pseudomonas diminuta
divergent evolution of enzymatic function and, 220
Pseudomonas putida

channeling of substrates and, 174
DNA primases and, 44
Pseudomonas spp.
divergent evolution of enzymatic function and, 210
PTEN
3-phosphorylated inositol lipids and, 582–84
PTEN/MMAC1/TEP1 gene
myotubularin and, 247
PTEN phosphatase
3-phosphorylated inositol lipids and, 554–55
P-type ATPase
copper trafficking proteins and, 677, 688–94
Puromycin
de novo protein folding in cell and, 637
Pyridoxal-5′-phosphate
free radicals and enzyme catalysis, 121
Pyrococcus abyssi
DNA primases and, 47
DNA topoisomerases and, 375
Pyrococcus furiosus
divergent evolution of enzymatic function and, 225
Pyrococcus horikoshii
DNA topoisomerases and, 375
Pyruvate formate-lyase
free radicals and enzyme catalysis, 121, 132–35

Q

Quadrupole mass spectrometers
electrospray
protein and proteosome analysis by mass spectrometry, 442–44
Quantitative mass spectrometry
protein and proteosome analysis by mass spectrometry, 462–63
Quaternary complex
actin filament network regulation and, 656–57, 659
Quinolinic acid
tryptophan metabolism and, 6

R

Rac protein
3-phosphorylated inositol lipids and, 576–78
Radicals
enzyme catalysis and, 121–46
Raloxifene
PPARγ and metabolic disease, 353
RAS-binding domain
3-phosphorylated inositol lipids and, 547–48
Rattus norvegicus
DNA primases and, 47
PTEN and myotubularin, 253–56
rco-1 gene
tryptophan metabolism and, 27
Reaction intermediates
channeling of substrates and, 149–76
Receptor modulators
PPARγ and metabolic disease, 341, 352–62
Receptor protein tyrosine kinases
phospholipase C isozymes and, 293–96
Receptors
G protein signaling regulation in yeast and, 703, 716–20
signal recognition particle and, 755, 762
viral membrane fusion and, 790, 801–2
Recognition code
Cys_2His_2 zinc finger proteins and, 313, 324–26
Recognition sites
prokaryotic and viral DNA primases and, 51–52
Recombinases
DNA topoisomerases and, 369
Recruitment
de novo protein folding in cell and, 631–35
Reductases
channeling of substrates and, 171–73
Regulation
actin filament network ARP2/3 complex and, 649, 661–66
de novo protein folding in cell and, 638–40
DNA primases and, 72–73
G protein signaling regulation in yeast and, 703–43
histone acetyltransferases and, 81, 99–101
phospholipase C isozymes and, 281–308
3-phosphorylated inositol lipids and, 576, 583–84
PTEN and myotubularin, 257–59, 268–69
transcriptional coactivator complexes and, 475–528
tryptophan metabolism and, 19–22, 28–31
Regulatory structural switches
fidelity of aminoacyl-tRNA selection on ribosome and, 429–31
Relaxation
DNA topoisomerases and, 377–78, 382–85, 395
Remodeling complexes
nucleosome transcriptional

coactivator complexes and, 486–87
3-phosphorylated inositol lipids and, 579–81
rep gene
DNA primases and, 50
Replication fork
replisome-mediated DNA replication and, 181–204
Replisome-mediated DNA replication
coordinated synthesis of leading and lagging strands, 186–89, 192–96, 200–3
E. coli replisome, 191–96
future research, 204
introduction, 182–83
lagging strand synthesis, 185–88
leading strand synthesis, 185, 191–92, 197–200
protein components, 189–91
T4 replisome, 196–97
T7 replisome, 183–89
Repression
Cys_2His_2 zinc finger proteins and, 313–37
tryptophan metabolism and, 1, 22, 25
Retinoids
PPARγ and metabolic disease, 342, 344–45, 353, 356–58, 362
Reverse gyrase
DNA topoisomerases and, 386–88
Reversible acetylation
histone acetyltransferases and, 81–112
Rezulin®
PPARγ and metabolic disease, 346
Rhodanese
de novo protein folding in cell and, 630
Rho-family GTPases
actin filament network regulation and, 649, 655, 661–65
Rho protein
tryptophan metabolism and, 18, 30
Rho small kinases
3-phosphorylated inositol lipids and, 576
Riboflavin synthase complex
channeling of substrates and, 175
Ribonucleoprotein core
signal recognition particle and, 766–68
Ribonucleoside triphosphates
DNA primases and, 39–73
Ribonucleotide reductase
anaerobic
free radicals and enzyme catalysis, 121, 135–36, 142–43
Ribosome fidelity
aminoacyl-tRNA selection and
aa-tRNA, 420–22
A site binding, 417–22
accomodation/peptide bond formation, 420–22
codon-anticodon complex, 426–28
codon recognition, 419
communication between functional centers, 428–29
conclusions, 431–32
discrimination, 422–24
Ef-Tu, 420, 431
EF-Tu-GDP, 420
GTPase activation, 420
GTP hydrolysis, 420
induced fit, 425–26
initial binding, 418–19
initial selection, 422–23
introduction, 416
kinetics, 417–26
near-cognate aminoacyl-tRNAs, 424
noncognate aminoacyl-tRNAs, 423–24
perspectives, 431–32
proofreading, 422–23
regulatory structural switches, 429–31
structural determinants, 426–31
substrate discrimination, 425
template-dependent enzymes, 425–26
Ribosomes
de novo protein folding in cell and, 603–41
protein and proteosome analysis by mass spectrometry, 468
signal recognition particle and, 760, 771–72
tryptophan metabolism and, 18, 24, 27, 29–30
Rickettsia prowazekii
DNA primases and, 44
DNA topoisomerases and, 375
Rifampicin
tryptophan metabolism and, 23
RING domain E3s
ubiquitination and, 503, 505, 507, 509–10, 512–13, 520–28
Ring-shaped chaperones
de novo protein folding in cell and, 615–19, 628
RNA structures
alternative
tryptophan metabolism and, 1, 8, 17, 21, 23–24, 29
RNA synthesis domain
DNA primases and, 68–69

Rocketing
actin filament network regulation and, 649–72
Rosiglitazone
PPARγ and metabolic disease, 346, 352–53, 355–56, 358, 361
rpoB gene
tryptophan metabolism and, 23
Rubinstein-Taybi syndrome
histone acetyltransferases and, 108, 110

S

Sac1p-containing inositol 5-phosphatases (SCIPs)
3-phosphorylated inositol lipids and, 552, 554, 556–57
Saccharomyces cerevisiae
actin filament network regulation and, 652, 656–57
copper trafficking proteins and, 679, 688
de novo protein folding in cell and, 607–8, 614, 624, 627, 632, 634
divergent evolution of enzymatic function and, 239
DNA primases and, 43, 47
DNA topoisomerases and, 372, 376, 399, 401, 407
G protein signaling regulation in yeast and, 703–43
histone acetyltransferases and, 83
3-phosphorylated inositol lipids and, 545
PTEN and myotubularin, 253, 256, 269
ubiquitination and, 506, 508, 516–17
SAGA complex
histone acetyltransferases and, 101–4
transcriptional coactivator complexes and, 490
Salmonella spp.
3-phosphorylated inositol lipids and, 555
tryptophan metabolism and, 10–11, 16, 19–20, 27
Salmonella typhimurium
channeling of substrates and, 153
divergent evolution of enzymatic function and, 236
DNA primases and, 44, 46
fidelity of aminoacyl-tRNA selection on ribosome and, 431
tryptophan metabolism and, 25
Scaffolds
de novo protein folding in cell and, 622
ubiquitination and, 522
Scar proteins
actin filament network regulation and, 649, 653–72
Schizosaccharomyces pombe
actin filament network regulation and, 656–57, 660
de novo protein folding in cell and, 608
DNA primases and, 47
DNA topoisomerases and, 376
fidelity of aminoacyl-tRNA selection on ribosome and, 431
G protein signaling regulation in yeast and, 723
PTEN and myotubularin, 253, 256, 269
Second messengers
phospholipase C isozymes and, 303–4
3-phosphorylated inositol lipids and, 535–89
PTEN and myotubularin, 247–74
Selectivity
aminoacyl-tRNA fidelity of on ribosome, 415–32
PPARγ and metabolic disease, 359–61
Sequence homology
replisome-mediated DNA replication and, 181–204
Sequence-specific interactions
DNA primases and, 52–53
Serine
tryptophan metabolism and, 6, 8, 11, 13
Serratia marcescens
tryptophan metabolism and, 23
Ser/Thr protein kinases
PTEN and myotubularin, 247–74
SH2 domain-containing inositol 5-phosphatases (SHIPs)
3-phosphorylated inositol lipids and, 557
SH3 domains
actin filament network regulation and, 649, 655, 665–66, 668
Shigella flexneri
actin filament network regulation and, 668
Shuffling
tryptophan metabolism and, 31
Signal recognition particle
Alu domain, 769–71
cotranslational protein targeting, 756–59
dynamic and hydrophobic groove in M domain of Ffh, 764–66
elongation arrest, 768–72

evolutionary conservation, 758, 760–62
future research, 772
GTPases, 759–68
introduction, 756
nucleotide exchange, 763
particle-receptor interaction, 762–63
perspectives, 772
ribonucleoprotein core, 766–68
ribosome, 771–72
signal sequence recognition, 763–64
Signal transduction
actin filament network regulation and, 649
G protein signaling regulation in yeast and, 703–43
phospholipase C isozymes and, 292–93
protein and proteosome analysis by mass spectrometry, 437, 466–67
PTEN and myotubularin, 247–74
ubiquitination and, 513–15
Single-stranded DNA-binding proteins
DNA primases and, 63–65
Single-stranded DNA (ssDNA)
DNA topoisomerases and, 369–408
Site specificity
histone acetyltransferases and, 91–93
Skeletal muscle
PPARγ and metabolic disease, 345, 349
Skeletal muscle and kidney-enriched 5-inositol phosphatase (SKIP)
3-phosphorylated inositol lipids and, 556
skp1 mutant
ubiquitination and, 526
"Small" chaperones
de novo protein folding in cell and, 614, 624–26
Small kinases
3-phosphorylated inositol lipids and, 576
SNARE proteins
viral membrane fusion and, 804
sog gene
DNA primases and, 49
SP6 primase
DNA primases and, 46
Specificity
Cys_2His_2 zinc finger proteins and, 313, 329–30, 335
3-phosphorylated inositol lipids and, 563–64
Spectroscopy
copper trafficking proteins and, 677
free radicals and enzyme catalysis, 121, 124, 128–30, 132, 134, 143
Spring-loaded model
viral membrane fusion and, 777, 783–84, 790–92
SPT genes
histone acetyltransferases and, 103–4
$SST2^{RGS}$
G protein signaling regulation in yeast and, 722–25
Stability
free radicals and enzyme catalysis, 121, 143–46
Stalk/pore formation
viral membrane fusion and, 793
Stalling
ribosomal
tryptophan metabolism and, 30
Staphylococcus aureus
DNA primases and, 44
Starvation
tryptophan metabolism and, 31
Streptomyces coelicolor
DNA primases and, 44
Structural determinants
fidelity of aminoacyl-tRNA selection on ribosome and, 426–31
Substrate binding
DNA primases and, 55–56
Substrate discrimination
fidelity of aminoacyl-tRNA selection on ribosome and, 415, 425
Substrate specificity
divergent evolution of enzymatic function and, 213
DNA topoisomerases and, 392–93
histone acetyltransferases and, 81, 91–93
Suicide inactivation
free radicals and enzyme catalysis, 121, 143–46
Sulfolobus acidocaldarius
DNA topoisomerases and, 372, 387
Sulfolobus shibatae
DNA topoisomerases and, 371–72, 406, 408
Sulfolobus sulfataricus
tryptophan metabolism and, 31
Sumoylation
ubiquitination and, 523–24
Sup35 prion-like protein
de novo protein folding in cell and, 641
Supercoiling
DNA topoisomerases and, 369–408
Superfamilies
divergent evolution of enzymatic function and, 209–11, 213–14

PTEN and myotubularin, 247–74
Superoxide dismutase
copper trafficking proteins and, 677, 694–98
Suppression
tryptophan metabolism and, 1, 7–8, 17–18
Suprafamilies
divergent evolution of enzymatic function and, 209, 213, 235–41
Supraoperons
tryptophan metabolism and, 28
Survival signaling
PTEN and myotubularin, 247–74
SwissProt database
protein and proteosome analysis by mass spectrometry, 453
Synechococcus PCC7942
DNA primases and, 44
Synechocystis PCC6803
DNA topoisomerases and, 375
Synechocystis sp.
DNA primases and, 44
Synergistic gene activation
transcriptional coactivator complexes and, 494
Synthases
channeling of substrates and, 149, 152–58, 171–73, 175
divergent evolution of enzymatic function and, 227, 233, 235–38
free radicals and enzyme catalysis, 121, 136–38
tryptophan metabolism and, 11, 21–22, 31
Synthetases
channeling of substrates and, 149, 158–65, 169–71
tryptophan metabolism and, 11, 20, 30

T

T4 gene 32 protein
DNA primases and, 64
T4 gene 41 helicase
DNA primases and, 60
T7 gene 2.5 protein
DNA primases and, 64
T7 gene 4 helicase domain
DNA primases and, 60–62
T7 primase
DNA primases and, 43, 45
TAF250 tandem bromodomains
transcriptional coactivator complexes and, 492–493
Tagged bait
protein and proteosome analysis by mass spectrometry, 437, 464–65
Tamoxifen
PPARγ and metabolic disease, 353
Tandem mass spectrometry
protein and proteosome analysis by mass spectrometry, 448–59
Tangier disease
PPARγ and metabolic disease, 351
Targeted acetylation
histone acetyltransferases and, 85–86
Targeting
3-phosphorylated inositol lipids and, 558–67
Target site selection
Cys_2His_2 zinc finger proteins and, 329–30, 335
TBP-associated factors (TAFs)
transcriptional coactivator complexes and, 475–528
Template-dependent enzymes
fidelity of aminoacyl-tRNA selection on ribosome and, 425–26
Tensin
PTEN and myotubularin, 247–74
Tetrahymena pyriformis
DNA topoisomerases and, 392
Tetrahymena spp.
histone acetyltransferases and, 98
transcriptional coactivator complexes and, 488
TFIIDs
transcriptional coactivator complexes and, 475–528
Thauera aromatica
divergent evolution of enzymatic function and, 225
Thermodynamics
copper trafficking proteins and, 681–82
Thermoplasma acidophilum
de novo protein folding in cell and, 618
divergent evolution of enzymatic function and, 225
Thermotoga maritima
divergent evolution of enzymatic function and, 236–37
DNA primases and, 44
DNA topoisomerases and, 375
Thermus aquaticus
signal recognition particle and, 760–61, 763–66, 768
Thiyl radical
divergent evolution of enzymatic function and, 209, 223–26
Thymidylate synthase-dihydrofolate reductase
channeling of substrates and, 171–73
Thyroid cancer

PTEN and myotubularin, 247–74
Time-of-flight
protein and proteosome analysis by mass spectrometry, 437, 442, 444–45, 449–51, 457
tna operon
tryptophan metabolism and, 29–30
tonB-trp operon
tryptophan metabolism and, 19
Topoisomerases
DNA, 369–408
Topology
DNA topoisomerases and, 369–408
Toxic aggregates
de novo protein folding in cell and, 603–41
Toxoplasma gondii
channeling of substrates and, 172
traC gene
DNA primases and, 50
Transcriptional attenuation
tryptophan metabolism and, 1, 23–26, 28–31
Transcriptional coactivator complexes
acetylation-dependent targeting modules, 491–92
ATP-dependent nucleosome remodeling complexes, 486–87
bromodomains, 491–92
chromatin-directed activities, 485–91
coactivators, 477–85
conclusions, 494–95
histone acetyltransferases, 487–90, 492
introduction, 476–77
modularity, 491, 493
synergistic gene activation by multiple activators, 494
TAFs, 477–79
TFIIDs, 477–79
universal stimulatory activity, 479–81
yeast mediator and related metazoan coactivator complexes, 481–85
Transcriptional regulation
DNA topoisomerases and, 369–408
G protein signaling regulation in yeast and, 736–39
histone acetyltransferases and, 81–112
transcriptional coactivator complexes and, 475–528
Transcription factors
Cys_2His_2 zinc finger proteins and, 313–37
PPARγ and metabolic disease, 341–63
trans-4,5-dehydrolysine
free radicals and enzyme catalysis, 143–44
Transducins
de novo protein folding in cell and, 627
Transfer protein primases
DNA primases and, 49–50
Transfer RNA (tRNA)
aminoacyl ribosome fidelity and, 415–32
de novo protein folding in cell and, 632, 638
tryptophan metabolism and, 17
Transient fusion intermediate
viral membrane fusion and, 788–89, 797–98
Translation
de novo protein folding in cell and, 603, 631–35
fidelity of aminoacyl-tRNA selection on ribosome and, 415–32
Translational coupling
tryptophan metabolism and, 25–26
Translocation
channeling of substrates and, 149–76
de novo protein folding in cell and, 631–35
signal recognition particle and, 755
Translocons
de novo protein folding in cell and, 634
signal recognition particle and, 760
Transport
DNA topoisomerases and, 404–5
TRAP protein
tryptophan metabolism and, 29
Treponema pallidum
DNA primases and, 44
DNA topoisomerases and, 375
free radicals and enzyme catalysis, 130–31
TriC/CCT chaperonin
de novo protein folding in cell and, 603, 612–13, 616–19, 627–28, 633–37, 639
Triesterase
divergent evolution of enzymatic function and, 221
Trigger factor
de novo protein folding in cell and, 614, 626, 632, 635, 639
Triglycerides
PPARγ and metabolic disease, 342, 345, 348
Trimer-of-hairpins
viral membrane fusion and, 777, 785, 787–88, 794
Tritium
free radicals and enzyme

catalysis, 144
Troglitazone
PPARγ and metabolic disease, 346
trp operon
tryptophan metabolism and, 10, 13–31
Tryptophan
channeling of substrates and, 169
divergent evolution of enzymatic function and, 209, 236–37
Tryptophan synthase
channeling of substrates and, 149, 152–58
Tubulin
de novo protein folding in cell and, 633, 635
Tumor suppressor genes
3-phosphorylated inositol lipids and, 582–84
PTEN and myotubularin, 247–74
Tunneling
substrates and, 149–76
Tyrosine
PTEN and myotubularin, 247–74
tryptophan metabolism and, 28
Tyrosine kinases
phospholipase C isozymes and, 293–303
Tyrosine recombinases
DNA topoisomerases and, 369

U

UBC3 gene
ubiquitination and, 508
Ubiquitination
conclusions, 527–28
de novo protein folding in cell, 638
E1 ubiquitin activating enzyme, 506
E2 ubiquitin-conjugating enzymes, 506–12
E3 ubiquitin-protein ligases, 513–20
G protein signaling regulation in yeast and, 703–43
HECT domain E3s, 515–20
introduction, 503–5
miscellaneous conjugating factors, 526–27
multisubunit RING E3s, 524–26
protein ligases, 503–28
RING domain E3s, 520–26
U-box
ubiquitination and, 527
UCP1 gene
PPARγ and metabolic disease, 345
UEV proteins
ubiquitination and, 527
UFD4 gene
ubiquitination and, 526
Universal stimulatory activity
transcriptional coactivator complexes and, 479–81
Ureaplasma urealyticum
DNA topoisomerases and, 375
Urease
divergent evolution of enzymatic function and, 220–22

V

Vaccines
HIV-1
viral membrane fusion and, 802–3
Vaccinia virus
actin filament network regulation and, 668–69
DNA topoisomerases and, 372, 395–97
VASP/MENA proteins
actin filament network regulation and, 655
Verprolin
actin filament network regulation and, 649, 655–56, 660, 663, 665–66, 668–70, 672
Vesicle fusion proteins
viral membrane fusion and, 795–96
VHL tumor suppressor protein
de novo protein folding in cell and, 628
Vicinal-oxygen-chelate superfamily
divergent evolution of enzymatic function and, 209, 230–33
Viral membrane fusion
inhibition and architecture, 779–80
CD4, 800–1
chemokine receptors, 801–2
common fusion mechanism, 789–93
conclusions, 803–4
conformational changes on fusion activation, 780–82
C-peptide region of gp41, 798–99
fusion proteins of miscellaneous enveloped viruses, 793–95
gp41, 802–3
gp41-derived inhibitory peptides, 787–88
gp120, 799–803
HIV-1, 796–803
HIV-1 Env, 780
HIV-1 vaccine strategies, 802–3
influenza HA, 780, 782–83
introduction, 778
miscellaneous

membrane fusion proteins, 793–96
model studies, 780–93
other reviews, 778
scope of review, 778
spring-loaded model, 783–84
structure/function studies, 782–83
transient fusion intermediate, 788–89, 797–98
vesicle fusion proteins, 795–96
Viruses
actin filament network regulation and, 668–69
de novo protein folding in cell and, 628
DNA primases and, 49–52
DNA topoisomerases and, 372–73, 395–97
ubiquitination and, 516

W

WABD domain
actin filament network regulation and, 655, 666
Waggle
fidelity of aminoacyl-tRNA selection on ribosome and, 431
WASp/Scar protein family
actin filament network regulation and, 649, 651, 653–72
WAVE proteins
actin filament network regulation and, 649, 653–54
WH2 motifs
actin filament network regulation and, 656–59, 661
White adipose tissue
PPARγ and metabolic disease, 344
Wilson disease
copper trafficking proteins and, 677, 688–89, 693
WIP/verprolin
actin filament network regulation and, 649, 655–56, 660, 663, 665–66, 668–69, 672
Wiskott-Aldrich syndrome
actin filament network regulation and, 649, 654, 669–71
Wortmannin
3-phosphorylated inositol lipids and, 550–51

X

Xenopus laevis
actin filament network regulation and, 651, 664, 669
PTEN and myotubularin, 253, 256
X-ray crystallography
copper trafficking proteins and, 682–86, 695
DNA topoisomerases and, 369–408
3-phosphorylated inositol lipids and, 545–50
PPARγ and metabolic disease, 353–58
viral membrane fusion and, 782–91, 793, 797, 799–800

Y

Yanofsky C, 1–34
ycbK gene
tryptophan metabolism and, 29–30
yczA gene
tryptophan metabolism and, 29–30
Yeast Mediator complex
transcriptional coactivator complexes and, 481–85
Yeast primase
DNA primases and, 47–48
Yeast Protein Database
protein and proteosome analysis by mass spectrometry, 453
Yeasts
actin filament network regulation and, 651–53, 656–57, 660, 666–67, 671–72
copper trafficking proteins and, 679–81, 688–89
de novo protein folding in cell and, 607–8, 614, 624, 627, 632, 634, 641
DNA topoisomerases and, 372, 376
G protein signaling regulation and, 703–43
signal recognition particle and, 772
transcriptional coactivator complexes and, 489–90
tryptophan metabolism and, 27
ubiquitination and, 506, 508, 516–17
Yersinia pestis
DNA primases and, 44
YMR1 gene
PTEN and myotubularin, 272
yodO gene
free radicals and enzyme catalysis, 132

Z

Zinc
ubiquitination and, 523
Zinc-binding domain
DNA primases and, 39, 65–68
Zinc ribbon motif
DNA primases and, 39
Zintevir
viral membrane fusion and, 801
Zuotin
de novo protein folding in cell and, 612, 633
